

RAHUL N B

Full Stack Developer

 Rahul N B  rahulnb1806@gmail.com  Rahul-NB-1806  9092932937

ABOUT ME

Computer Science and Engineering student with a strong foundation in MERN Stack and Full Stack Development. Passionate about creating responsive, user-centric web applications and solving real-world problems through technology. Proven ability to learn new tools quickly, debug complex issues, and develop complete software solutions from concept to deployment. Experience working on real client-focused projects, with a particular interest in frontend development and translating business requirements into effective digital solutions. A proactive team player committed to continuous learning, innovation, and delivering high-quality software.

EDUCATION

Dr.N.G.P. Institute of Technology,
Coimbatore 2023-2027 ✓ CGPA: 7.16

VIDYAA VIKAS MATRIC HIGHER
SECONDARY SCHOOL ✓ percentage: 69.3%

PROJECTS

BOI Monitor

BOI Monitor is a client-based mobile application developed to address real-world monitoring and management requirements. The application was designed with a focus on usability, performance, and efficient data visualization, enabling users to access and manage information through an intuitive mobile interface. Collaborated with client requirements, implemented frontend functionalities, integrated backend APIs, and contributed to application testing and debugging. This project provided hands-on experience in mobile application development, API integration, state management, and delivering production-oriented software solutions.

Smart Parking Management System (Academic Project)

Developed a Smart Parking Management System as an academic project to improve parking space monitoring and management. The system utilizes computer vision and OCR technologies to detect vehicle number plates in real time and automatically update parking slot availability. Built a web-based interface for administrators and users to monitor parking occupancy, reducing manual effort and improving operational efficiency. The project provided hands-on experience in Flask, OpenCV, OCR integration, database management, and real-time system development.

E-Commerce Platforms (Combined Project)

Developed a full-stack E-Commerce Platform focused on delivering a seamless online shopping experience. Implemented features such as product browsing, product details, shopping cart management, responsive user interfaces, and dynamic product rendering. Built scalable frontend components and integrated backend services to manage product and user data efficiently. The project enhanced my understanding of full-stack application development, state management, API integration, and modern web development practices while improving user experience and application performance. Technologies: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, JavaScript, HTML, CSS, REST APIs, Git, GitHub

SKILLS

- Languages: Java, Python, JavaScript
- Frontend: HTML5, CSS3, React.js, Tailwind CSS, Bootstrap
- Backend: Node.js, Express.js
- Database: MongoDB, MySQL
